

CYCLISTIC CASE STUDY: Converting Casual Riders Into Annual Members

BUISNESS TASK

The goal of this analysis is to understand the differences between casual riders and annual members, in order to identify marketing strategies that can encourage casual riders to become members.

DATA SOURCE

The data source consists of 12 months of Cyclistic trip data from 2025. It includes information such as trip duration, rider type (casual or member), and time related variables.

DATA CLEANING AND PREPARING

The data was cleaned and prepared using Excel and power Query. This involved removing invalid ride durations, handling missing values and creating new variables such as ride duration (in minutes), day of the week, hour of the day and month.

INSIGHTS

1. Member vs Casual Rider (Total Riders)

2. Average Ride Duration

3. Monthly Trends

4. Day Of Week Patterns

5. Hour Of Day Patterns

The data shows that casual riders are most active during the summer months (June – September), especially on weekends and in the afternoon (12:00 – 18:00). This suggests that casual riders mainly use the service for leisure rather than daily commuting.

KEY FINDING

- Members take more rides overall, showing more consistent and frequent usage
- Casual riders have longer trip durations, indicating more leisure use
- Casual rider activity increases during summer months
- Casual riders are most active on the weekends and during the afternoons

RECOMMENDATIONS

Cyclistic should focus on targeting casual riders during their peak usage times, particularly summer weekends in the afternoon. Some possible strategies include:

- Offering discounted or trial memberships during the summer
- Running time limited promotions on weekends
- Targeting afternoon peak hours with marketing campaigns
- Creating flexible membership option for frequent casual riders to encourage conversion to annual membership.

CONCLUSION

This analysis highlights clear behavioural difference between casual riders and members. This insight provides a strong opportunity for targeted marketing strategies that can help increase membership conversion.
